```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Genet. 11:885-891(2002)!- FUNCTION: Not known!- SUBCELLULAR LOCATION: Lysosomal!- SUBCELLULAR LOCATION: Lysosomal!- TISSUE SPECIFICITY: Ubiquitous!- DISEASE: Defects in CLN5 are the cause of Finnish variant late- infantile neuronal ceroid lipofuscinosis (VLINCL) [MIN:256731]; also known as ceroid lipofuscinosis neuronal 5 (CLN5). VLINCL is a fatal childhood neurodegenerative disease characterized by progressive visual and mental decline, montor disturbance, epilepsy and behavioral changes. The first symptom is motor clumsiness, followed by progressive visual failure, mental and motor deterioration and later by myoclonia and seizures!- DATABASE: NAME=NCI CLN5; NOTE=Neural Ceroid Lipofuscinoses mutation db; WMW#"http://www.ucl.ac.uk/ncl/CLN5.html". Down-regulated during differentiation.

CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein tyrosine + phosphate.

SUBCELLULAR LOCATION: Type I membrane protein.

DEVELOPMENTAL STAGE: Detectable in the epiblast of cocytes and throughout early mouse embryo development. In adult, expression i localized in gonadal germ cells.

SIMILARITY: Contains 2 protein-tyrosine phosphatase domains.

SIMILARITY: Contains 10 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nichols J., Smith A.;

IT "Crystal structures and structural comparison of Thermoattinomyces

IT "Ulgaris R-47 alpha-amylase 1 (TVAI) at 1.6 A resolution and

IT alpha-amylase 2 (TVAII) at 2.3 A resolution.";

IJ Mol. Biol. 318:443-453(2002).

C -i- FUNCTION: Hydrolyses of 1.4-alpha-glucosidic linkages in

C of starch. Endohydrolysis of 1.4-alpha-glucosidic linkages in

C pulhulan to form panose. Cleaves also (1-6)-alpha-glucosidic

C linkages to form maltotriose.

C -i- CATALYTIC ACTIVITY: Hydrolysis of pullulan to panose (6-alpha-D-

C glucosylmaltose).

C -i- CORACTOR: Binds 1 calcium ion per subunit.

This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation -
                                      -!- SUBCELLULAR LOCATION: Nuclear.
-!- MISCELLANEOUS: In eukaryotes there are five DNA polymerases:
-ipha, beta, gamma, delta, and epsilon which are responsible different reactions of DNA synthesis.
-!- SIMILARITY: Belongs to the DNA polymerase type-9 family.
                                                                                                                                                                     Pearson B.E., Nasheuer H.P., Wang T.S.;

Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5'-phosphate + H(2)O.
-!- SIMILARITY: Belongs to the pseudouridine synthase trub family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -!- FUNCTION: Could be responsible for synthesis of pseudouridine fro uracil-13 in transfer RNAs (By similarity).
-!- CATALYTIC ACTIVITY: Uracil + D-ribose 5-phosphate = pseudouridine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "The complete genome sequence of the hyperthermophilic, sulphate-reducing archaeon Archaeoglobus fulgidus.";
Nature 390.364-370(1997).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HAMAP; MF_01082; -; 1.

IsoId=095361-2; Sequence=VSP 009098;
IsoId=095361-2; Sequence=VSP 009098;
-!- TISSUE SPECIFICITY: Highest levels found in testis, ovary, smal intestine, colon, placenta, heart, skeletal muscle and mammary gland. More highly expressed in the fetus than in the corresponding adult tisues. Expressed in basal keratinocytes. corresponding adult tisues. Expressed in basal keratinocytes.-!- SIMILARITY: Belongs to the TRIM/RBCC family.
-!- SIMILARITY: Contains 1 B30.2-like domain.
                                                                                                                                                                                                                                                                                                                            GO; GO:0005737; C:cytoplasm; TAS
